

Requirements form: Virtual Regulatory Expert

Editable PDF version

Thank you for taking a few minutes for this form. Your expertise is the most important piece for designing an artificial intelligence tool able to act as an expert in biopharmaceutical and biotechnology regulatory affairs, always up to date, both internationally and in Cuba.

You do not need any technical knowledge of computing or artificial intelligence to answer. Simply think about what you would ask an expert colleague who was available to you at any time, with all the information current.

There are no right or wrong answers. You may answer in as much depth as you like, leave questions blank and come back later: your answers are saved automatically on this device while you fill out the form.

At the end you will find the button to submit your answers for good.

Estimated time: 20 to 35 minutes (you may pause and resume at any time)

How to complete this form

- You can fill in this PDF directly on your computer with any reader that supports forms (Adobe Acrobat Reader, macOS Preview, Foxit, your browser, etc.), or print it and fill it in by hand.
- All questions are optional: answer in as much depth as you like.
- If you prefer to answer online, with automatic saving and in your preferred language, use the web form: <https://pol4720.github.io/IATools/experto-regulatorio/>
- When you are done, send this PDF back (by email or to whoever shared it with you) or transcribe your answers into the online form.

Section 1/10 — About you

This information helps us understand the experience behind your answers. You may leave it blank if you prefer to answer anonymously.

Full name

Optional. Leave it blank if you prefer to answer anonymously.

Area or specialty

Your specific specialty within the biopharmaceutical or biotechnology field.

Current position or role

For example: specialist, department head, advisor, senior researcher, etc.

Years of experience in the biopharmaceutical/biotechnology regulatory field

Less than 5 years

Between 5 and 15 years

Between 15 and 30 years

More than 30 years

Email or contact method (optional)

Only if you would like us to contact you to expand on any answer.

Section 2/10 — Regulatory scope of interest

Help us define which products and regulatory frameworks this assistant should be expert in.

Which products or processes do you need regulatory guidance on?

Vaccines

Monoclonal antibodies and other biopharmaceuticals

Medical devices and equipment

Clinical trials

Software or AI as a regulated product

Good Manufacturing Practices (GMP)

Pharmacovigilance and post-marketing safety

Biosafety and bioethics

Intellectual property and patents

Other (please specify):

Which regulatory frameworks or authorities are most relevant to your work?

CECMED (Cuba)

FDA (United States)
EMA (European Union)
WHO/PAHO — prequalification and international standards
ICH (international technical harmonisation)
ISO standards (13485, 14971 and similar)
AI regulatory framework (EU AI Act and equivalents)
Other national agencies (ANVISA, COFEPRIS, etc.)
Other (please specify):

What geographic scope should the expert cover?

Cuba only
Cuba + region (Latin America and the Caribbean)
Cuba + major international agencies (FDA, EMA, WHO...)
Global coverage, unrestricted

Notes or observations about scope

Section 3/10 — What it should be able to do for you

This is the most important section of the form. Mark everything you find useful, even if it seems ambitious: there is no technical limit you should impose on yourself.

Which functions would you like this virtual expert to have?

Answer specific questions like an expert colleague would, always citing the exact regulation or source
Similar to asking a specialist and getting a clear answer with a reference to the applicable regulation.

Proactively monitor and alert when a relevant regulation changes
For example, notify you as soon as the FDA, EMA or CECMED publish an update that affects you.

Help draft and review regulatory documents (dossiers, protocols, procedures)
For example, a draft of a technical dossier, a standard operating procedure or a report.

Detect gaps between what we do and what a specific regulation requires
Known as a "gap analysis": comparing a current practice against a regulatory requirement.

Compare requirements from different regulatory agencies for the same product or process
For example, what CECMED requires versus what the EMA requires for the same type of product.

Simulate a regulatory inspection or audit and point out weaknesses
A kind of "rehearsal" before a real inspection, flagging what would likely be observed.

Act as a tutor or trainer for new or trainee staff
Explain regulatory concepts step by step to someone who is learning the subject.

Help classify the regulatory risk of a product, process or system
For example, determine whether a product or AI system falls into a high-risk category.

Track pharmacovigilance and post-marketing safety issues
Helps monitor safety signals and reporting obligations once the product is in use.

Translate or explain in plain language complex regulations or those in another language
Turn a dense regulatory text (or one in another language) into a clear explanation.

Assess whether an AI system we use internally complies with applicable AI regulation
Review our own AI tools against rules such as the EU AI Act.

Generate personalized, presentation-ready reports on a regulatory topic
A downloadable, organized document ready to share with management or a third party.

Track scientific and regulatory literature related to a product or technology
Search for and summarize relevant, recent articles, guidelines or publications.

Build checklists for regulatory procedures or submissions
A step-by-step list of what needs to be gathered before a submission.

Other (please specify):

Of all the functions above, which 3 are the most urgent for you today?

Section 4/10 — Information sources it should master

An expert is only as good as its information. Help us identify what it should read and how often it should be updated.

Which information sources do you consider essential?

CECMED regulations and guidelines

Instituto Finlay's internal documents and procedures

ICH guidelines

FDA guidelines and databases

EMA guidelines and databases

WHO/PAHO publications and standards

General Cuban legislation (Official Gazette and similar)

Scientific literature (PubMed and other databases)

ISO standards

International AI regulatory framework

Other (please specify):

In which languages should it be able to read and interpret sources?

Spanish

English

Portuguese

French

Other (please specify):

How often should its regulatory knowledge be updated?

In real time or daily

Weekly

Monthly

Only when I ask it to

Notes or observations about information sources

Section 5/10 — How you prefer to interact with it

Tell us how you imagine using this tool day to day.

How would you like to communicate with the virtual expert?

- Natural language conversation, like a chat
- Structured forms to request specific information
- Downloadable reports or documents (PDF, Word)
- Automatic notifications or alerts (email, messaging)
- Visual dashboard with the regulatory status at a glance
- Integration with tools I already use (email, Word, etc.)
- Other (please specify):

Which devices would you typically use it from?

- Desktop or laptop computer
- Mobile phone
- Tablet

Do you need it to work without an internet connection?

- Yes, I need it to work without an internet connection
- I prefer it to have internet access to always stay up to date
- Both options would be ideal
- I'm not sure

Notes or observations about the interaction style

Section 6/10 — Style and personality of the virtual expert

Even though it is an AI tool, how it communicates matters as much as what it knows.

What tone should it typically use?

- Formal and technical
- Approachable and didactic, like a mentor
- Depends on the topic or who is asking

By default, how do you prefer the answers to be?

- Brief and direct
- Complete, with context and justification
- That it first asks how much detail I want

Should it always state where the information comes from?

- Yes, it must always state the exact source
- Only when I ask for it
- Not essential

What should it do when it is unsure or the regulation is ambiguous?

- It must clearly state that it is unsure or that the regulation is ambiguous
- It should always give an answer, even if not 100% sure
- Depends on the case

Notes or observations about style

Section 7/10 — Trust, validation and limits

In such a sensitive subject, reliability matters as much as capability.

How serious would it be if it gave an incorrect answer without warning?

1 · Not serious 2 3 4 5 · Unacceptable

Which verification mechanisms would give you confidence?

- Direct links to the original regulatory source
- A stated confidence level for each answer
- Date of the last update of the information used
- The ability for a person to review it before official use
- A log of all queries so they can be audited later
- Other (please specify):

How would its answers be used in practice?

- As support or a draft that a person always reviews before use
- As an authoritative source for internal decisions
- Both, depending on the type of query

How strict should it be with the institute's confidential information?

- Confidential information must never leave our control
- It may use external services if they are secure and trustworthy
- I'm not sure, I would like guidance on the options

Notes or observations about trust and validation

Section 8/10 — Real use cases

Concrete examples are worth more than a thousand general descriptions.

Write 3 to 5 real questions or tasks you would ask this virtual expert today if it already existed

Describe a recent situation where you wished you had this expert available

Section 9/10 — Priorities and what can't be missing

Help us distinguish between what is essential and what is desirable.

What is absolutely essential for this tool to be useful to you?

What would be a nice-to-have, but not essential?

What concerns you about such a tool? (errors, use of your data, excessive dependence, etc.)

Section 10/10 — Your aspiration without limits

The last question is the most important of all.

If there were no technical limitation at all, what would you ask this virtual expert for? Be as ambitious as you like.

Final comments or observations
